

ABSTRACT OF THE DISCLOSURE

A detachable audio video playing/displaying apparatus includes a detachable media-accessing device, a displaying module, and a locking apparatus. The displaying module includes a monitor and a fixing base. The fixing base for receiving the media-accessing device has a second input/output (I/O) port for connecting with a first I/O port on the media-accessing device. The media-accessing device, such as a portable DVD player, can be detached from the displaying module or be combined with the displaying module into a unity. The locking apparatus includes a locking piece at the front of the fixing base, and a groove on the media-accessing device. When the media-accessing device is placed into the fixing base, the locking piece can be engaged with the groove so that the media-accessing device can be fixed on the fixing base. Signals from the media-accessing device can be output to the monitor via the first and the second I/O ports.
